The invention relates to a novel composition comprising a substance that CC modulates the status of a protein, 121P2A3. The composition of the CC invention has cytostatic and immunostimulant activity, and is useful as a CC vaccine. The 121P2A3 proteins and polynucleotides are useful for CC eliciting humoral or cellular immune response. The polynucleotides are CC useful for characterising cytogenetic abnormalities of this chromosomal CC locus, as tools that can be used to delineate cytogenetic abnormalities CC in the chromosomal region that encodes 121P2A3 that may contribute to CC malignant phenotype, and in assessing the status of 121P2A3 gene products CC in normal versus cancerous tissues. The proteins are useful for CC generating and characterising domain-specific antibodies, for identifying agents or cellular factors that bind to 121P2A3 or a particular structure CC domain, and in various therapeutic and diagnostic contexts, including CC cancer vaccines. The antibodies or T cells reactive with the product are CC useful in passive or active immunisation, and in imaging methodologies CC represent peptides from the 121P2A3 variants of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition comprising a substance that modulates the status of 121P2A3 polypeptides, useful for eliciting humoral or cellular immune responses or in assessing the status of 121P2A3 gene products in normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 13; Page 182; 362pp; English.
